

2014.06.16 - Technology preview of swak4Foam for blueCFD-Core 2.3

blueCAPE is proud to announce that we have now made available a technology preview of swak4Foam for blueCFD®-Core 2.3.

The incredible toolkit swak4Foam was present in blueCFD-Core 2.0 and 2.1, but it wasn't available in blueCFD-Core 2.3-1 when it was released. Now users can try the (almost) latest swak4Foam version from the development branch "port_2.0.x" from swak4Foam's mercurial repository, which is currently undergoing tests and is scheduled to be released as version 0.3.1.

This is limited to our clients that have access to blueCFD-Core 2.3, who can now download the source code tarball from the blueCFD-Core 2.3 download area. Installation instructions are provided in the download description.
